1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 4,912,937 to Nakamura et al, newly cited, in view of Japanese Patent No. JP02002162126A to Akira et al. Nakamura et al in Fig. 10 discloses the claimed refrigeration system of a compressor, two parallel heat exchangers 3 on one side of the system and a heat exchanger 7 on the other side, and an accumulator 9 on the low side. However, Nakamura et al does not disclose the claimed refrigerant being one of a pseudo azeotropic refrigerant, an azeotropic refrigerant, and a single refrigerant having saturation pressure characteristics higher than the saturation pressure characteristics for R407C. Akira et al teaches a refrigeration system having a refrigerant that has a pressure as high as about 1.5 times among HFC refrigerants as compared with R22 refrigerants. Thus, it would be obvious to modify Nakamura et al to use a refrigerant that has a saturation pressure characteristic higher than the saturation pressure characteristic for R407C, in view of Akira et al, to yield the predictable result of optimizing the operation of the refrigeration system.

3. Applicant's arguments filed December 21, 2007 have been fully considered but they are not persuasive. Applicant's invention is nothing more than the mere substitution of one type of well known refrigerant for another well known refrigerant. It is not seen

that the substitution of the refrigerant taught in Akira et al into the refrigeration system of Nakamura et al is a patentable invention.

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
